Pack of canned fishery products, 1951-71	13

Source of data:--Since 1921, the National Marine Fisheries Service of the National Oceanic and Atmospheric Administration and its predecessor organizations have made annual surveys for statistics on the domestic production of canned fishery products. The data collected include statistics on the production and value of each canned commodity by can size and trade classifications. The value shown for the products constitutes the gross amount received by the producer at the production point; no deductions are made for commission or expenses. Statistics on the Alaska canned pack were furnished by the Alaska Department of Fish and Game.

REVIEW

The 1971 pack of canned fishery products in the United States, American Samoa, and Puerto Rico was 46.3 million standard cases (1.4 billion pounds) valued at a record $763.5 million to the canning companies. Compared with 1970, this was an increase of 137,198 cases (6.0 million pounds) in volume and $21.7 million in value. There were record packs of tuna, animal (pet) food, clam chowder and larger packs of alewives, mackerel, Maine sardines and oysters. The canned packs of salmon, crab meat, and shrimp were less than in 1970.

The pack for human consumption (809.2 million pounds) was 4.0 million pounds more than in 1970, while the amount for bait and animal food increased 2.0 million pounds. Five items--salmon, tuna, shrimp, clam products, and animal (pet) food--accounted for 93 percent of the total value of all canned fishery products. The pack of animal (pet) food consisting of less than 10 pounds of fish per standard case (3.5 million standard cases valued at $19.9 million) was not included in the 1971 data.

Salmon:--The 1971 pack of Pacific salmon totaled 3.4 million standard cases (162.9 million pounds) valued at $129.7 million compared with the 1970 pack of 3.8 million cases valued at $138.7 million. The production in Washington and Oregon of 614,199 standard cases was more than double the 1970 pack of 257,692 standard cases.

Tuna:--The 1971 pack of tuna was a record 22.2 million standard cases (438.8 million pounds) valued at a record $413.3 million. The 1971 pack exceeded the previous record pack in 1970 by about 100,000 cases and $32.7 million. The Pacific Coast led in production with 50.3 percent of the total, followed by Puerto Rico with 34.9 percent; the Atlantic Coast, Hawaii, and American Samoa accounted for the remainder.

Mackerel:--The 1971 pack of mackerel was 367,043 standard cases valued at $3.1 million compared with a 1970 pack of 188,609 standard cases valued at $1.5 million. Pacific mackerel were not canned on a commercial basis in 1971.

Shrimp:--The 1971 pack of shrimp was 3.2 million standard cases (21.4 million pounds) valued at $33.7 million, compared with the record 1970 pack of 3.7 million standard cases (25.1 million pounds) valued at $37.3 million.

Clams:--The 1971 pack of clams and clam products was a record 2.7 million cases valued at a record $26.4 million. The production of whole and minced clams was 634,450 standard cases valued at $9.8 million while the production of clam chowder and juice totaled 2.1 million cases valued at $16.6 million.
